AWS Cloud Engineer - Senior Java Backend Developer

PROFESSIONAL SUMMARY

Cloud Engineer scaling enterprise AWS cloud infrastructure with AWS Well-Architecture. Designing, building, monitoring, securing, maintaining, debugging, optimizing cloud infrastructure and driving 99.99% uptime across mission-critical systems.

TECHNICAL SKILLS

As Cloud Engineer

- Design and deploy production systems using core AWS services
- Build and maintain Infrastructure as Code using Terraform
- Develop reusable Terraform modules and maintain version-controlled infrastructure
- Uptime — Ensure systems are highly available and reliable
- Security — Protect data, identities and infrastructure
- Performance — Deliver fast, scalable and efficient systems
- Cost — Optimize and control cloud spending
- Monitor and observe infrastructure
- Scripting and Automation using Linux and Python
- Work with DevOps, Security, and Engineering teams to implement CI/CD and deployment strategies

As Java backend developer

- 7+ years of hands-on experience as Java backend developer
- Strong proficiency in designing scalable system with Java Spring Boot for building distributed microservices and event-driven architecture, SQL/NoSQL, API RESTful
- CI/CD practice (GitHub Actions, GitLab), Docker & Kubernetes
- Development and deployment with Google Cloud Platform

KEY PROJECT HIGHLIGHTS

- Production-grade High-Availability (Multi-AZ) systems
 -
- Production-grade Multi-tier web application infrastructure
 -
- Production-grade Secure application architecture
 -
- Production-grade Microservices Modernization (ECS Fargate)
 -
- Production-grade Serverless
 -
- Production-grade Event Driven architecture
 -
- Production-grade API Security
 -
- Production-grade Disaster Recovery
 -
- Production-grade Cloud Security
 -

PROFESSIONAL EXPERIENCE

AWS Cloud Engineer

[Learn new skills](#)

May 2025 - Present

Context

Rooted in Senior Java Backend Development, I approach cloud infrastructure with a developer-first mindset — delivering systems that are production-ready, operationally resilient, and built to scale. My hands-on experience building scalable Java backend systems gives me a unique edge — I understand how applications behave in production, which directly informs how I design resilient, developer-friendly AWS infrastructure that is secure by default, consistent across environments, and easy to operate.

My responsibilities:

- Build production-grade cloud infrastructure using AWS Core AWS Services.
- Design, build and maintain Infrastructure as Code using Terraform.
- Develop reusable Terraform modules and maintain version-controlled infrastructure.
- Work with DevOps, Security, and Engineering teams to implement CI/CD and deployment strategies.
- Ability to work effectively in a Linux-based development environment.
- Familiarity with containers and orchestration (e.g. Docker, Kubernetes).
- Familiarity with CI/CD pipelines and automation tools.
- Hands-on experience with Python.

Technologies

Core AWS Services: AWS Global Infrastructure, Identity and Access Management (IAM), Virtual Private Cloud (VPC), Amazon EC2, Auto Scaling, Elastic Load Balancing, Container Services (ECS, EKS, Fargate), AWS Lambda & Serverless, Amazon S3, Amazon EBS & EFS, CloudFront, Route 53, CloudWatch, CloudTrail.

Java analyst-developer

[Systematix Inc.](#)

Octobre 2023 - Present

Client: [Ministère de la Cybersécurité et du Numérique \(MCN\)](#)

Context

Project supporting the evolution, operation, and governance of SAGIR solutions. The SAGIR solutions address the needs of over a hundred public bodies within the Quebec public service, and aim to consolidate administrative services, progressively replace existing systems, and standardize and streamline processes. These solutions are built around a single, unified information architecture in order to simplify data entry, ensure data integrity, and guarantee secure processing.

My responsibilities:

- Perform analysis and programming
- Develop new features
- Handle incidents and maintain the application
- Optimize SQL query performance
- Manage the component program library using Subversion (SVN) version control
- Update customized features within the solution
- Write and execute unit test scenarios
- Conduct code reviews
- Prepare migration plans for components, software, and associated configurations across all environments for each change request
- Write technical documentation

Technologies

Java 1.8, PL/SQL Developer, Client Oracle 19c, Oracle E-Business Suite 12.2.12, OA Framework (OAF), Oracle Forms 10, Oracle Reports 10, XML, BiPublisher Desktop.

Java Spring Boot Backend Developer

[eTech Consulting](#)

Avril 2018 - Août 2023

Context

Strong expertise in supporting high-load production systems and building scalable cloud-native applications using Java and Spring Boot, with hands-on experience in GCP infrastructure and CI/CD pipelines. As a Backend Developer at eTech Consulting for 5 years, I contributed to multiple projects spanning design, development, testing, and production deployment, leveraging Java Spring Boot, Docker, Kubernetes, and Google Cloud Platform.

My Responsibilities:

- Build large-scale, high-availability systems using Java and Spring Boot
- Design, develop, and maintain REST APIs and distributed microservices for rating and charging platforms using Spring Boot
- Participate in technical analysis and system design for various projects
- Model relational and non-relational databases (SQL and NoSQL)
- Develop and secure RESTful APIs
- Deliver features following Agile/Scrum methodologies
- Develop features leveraging Google Cloud Platform (GCP)
- Write and maintain unit, integration, and end-to-end tests
- Design and implement ETL/ELT data processing pipelines
- Build and improve event-driven architectures using messaging systems such as Pub/Sub and Apache Kafka
- Ensure monitoring, logging, and observability across cloud environments
- Debug, maintain, and optimize codebases and databases
- Containerize and orchestrate applications using Docker and Kubernetes
- Work with DevOps tools including CI/CD pipelines, GitHub, GitLab, and JIRA
- Participate in code reviews, technical design discussions, and architecture decisions
- Maintain and optimize high-load, high-availability production systems
- Leverage AI-driven development tools to enhance productivity and code quality

Technologies

Java Spring Boot, Maven, Gradle, Spring Data, Hibernate ORM, Spring Security, Reactive Programming, API Restful, JSON, SQL/MySQL/PostgreSQL/NoSQL MongoDB, Git/GitHub Actions/GitLab, CI/CD pipelines, Docker, Cloud Dataflow, Pub/Sub, Cloud Scheduler, Cloud Run, BigQuery, GKE, Apache Beam, Apache Kafka, [Diagrams.net](https://diagrams.net)

SOFT SKILLS

- Excellent analytical and problem-solving skills
- Strong interpersonal and communication skills
- A proactive and self-motivated attitude
- Ability to work both independently and in a team
- Flexibility to manage multiple tasks and adapt to changing priorities

EDUCATION

- Master of Computer Science (Software Engineering)
- Bachelor of Information Technology (Systems and Networks)

LANGUAGE

- English and French professional

INTERESTS

- Jogging and Basketball
- Technology watch
- Artificial Intelligence (AI)
